

UGS KATHARINA
Erdgasspeicher Peissen GmbH

Annex 3.2. (Applicable to Storage Year 2023)

Withdrawal characteristic curve (logic)

Working Gas Level	Withdrawal Capacity
100%	100%
64%	100%
0%	2%

The maximum Withdrawal Capacity depends on the working gas level of the Storage Customer in his respective Storage Customer's Storage Account, expressed as a percentage (hereinafter: "Working Gas Level"). Depending on the Working Gas Level the Storage Service Provider may adjust on a percentage basis as described above in the table and the Withdrawal characteristic curve (logic) the overall contracted Withdrawal Capacity of a Storage Customer.

UGS KATHARINA
Erdgasspeicher Peissen GmbH

Within a range of a Working Gas Level of above 64% the Storage Customer may use 100% of the Withdrawal Capacity. In case the Working Gas Level falls below 64% the Withdrawal Capacity shall be gradually decreased on a percentage basis depending on the actual Working Gas Level in line with the threshold ranges described in the table above.

Due to technical reasons, at a working gas level of 5% and less only interrupted Withdrawal Capacities are possible.
